                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell useful for diagnosis and treatment of diseases involving abnormal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    treatment of allergy, asthma and hypersensitivity reactions, treatment of allergy, asthma and hypersensitivity reactions, the stream of allergy, asthma and hypersensitivity reactions, the stream of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        proliferation, including arteriosclerosis and vascular restaurs in proliferation, including arteriosclerosis and vascular restaurs. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for shock syndrome or allosensitisation due to blood transfusions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        133 AENEPCEVTCLPSHWTRLPDISWELGLLVSHSSYYFVPEPSDLQSAVSILALTPQSNGTL 192

They grave's disease, Hashimoto's thyroiditis and diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, the periodic periodic properties (grave's disease), various pneumopathies pemphigoid), endocrinopathies (grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present lymphoproliferative disorders such as multiple myeloma B7-Lh2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also refer for Advanced to the prolong graft survival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are growth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δÃ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           30-MAR-2001; 2001WO-US08631.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WO200175067-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, ollipomers, and for chromosome polymerase chain reaction (PCR) primers, ollipomers, and for chromosome polymucleotides are also used in diagnostics as expressed sequence tags polynucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also useful in gene therapy techniques for itesting expression antibodies against it, detecting or (II), (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and a quantitating a polypeptide in tissue, as molecular weight markers and a quantitating of sites expressing (II). (I) and (II) are useful for treating imaging of sites expressing (II). (I) and (II) are useful for treating imaging of sites expressing (II). (I) and (II) are useful for treating imaging of sites expressing (II). (II) are useful for treating imaging of sites expressing (II).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-OCT-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess responsible for genetic disorders or other traits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Drmanac RT, Liu C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (HYSE-) HYSEQ INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 20; SEQ ID No 58528; 103pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              at ftp.wipo.int/pub/published_pct_sequences.

               cc dependent B-cell mediated diseases and autoimmune diseases. B7-L CC diseases involving chronic immune cell dysfunction or to treat cd diseases involving chronic immune cell dysfunction or to treat color diseases involving chronic immune cell dysfunction or to treat color diseases involving chronic immune cell dysfunction or to treat color diseases involving chronic immune cell dysfunction or to treat color diseases. Also cleared is cleared in flammatory diseases such as systemic lupus crythematosus, rheumatoid cell dysfunction or to provide inflammatory disease such as first and disease involving abnormal cell crytical solution or to prolong graft survival. B7-L molecules are also cransplantation or to prolong graft survival. B7-L molecules are also cransplantation, including arteriosclerosis and vascular restenosis. CC proliferation, including arteriosclerosis and vascular restenosis. CC proliferation including arteriosclerosis and vascular restenosis. CC antagonists of B7-L polypeptides are useful for alleviation of toxic cross syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAU75544 standard; Protein; 370 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) a useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometricsis) and miscarriage, preterm labour and delivery and endometricsis)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (AMGE-) AMGEN INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a rol growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 13; Fig 5; 135pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB; ABK13032
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  welcher AA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seminal vesicle hyperplasia in transgenic mice overexpressing B7-L seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (1) are useful for the treatment of polypeptide seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, teaticular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be manipulated to regulate cytotoxic T-lymphocyte response pathway can be respons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2002-130881/17.

PT New BT-like polypeptides, polynucleotides and their modulators, useful proliferative disorders, e.g. cancer and arteriosclerosis.

PT for disgnosing, preventing and treating reproductive immune and proliferative disorders, e.g. cancer and arteriosclerosis.

The invention relates to an isolated BT-like (BT-L) polypeptide (I). CC Conditions including reproductive disorders (e.g. infertility as conditions including reproductive disorders (e.g. infertility conditions including reproductive disorders (e.g. infertility, conditions including senior) and conditions (e.g. infertility) and extracellular domains and other regulators of BT-L polypeptides are growth and maintenance of cancer regulators of BT-L polypeptide (e.g. cancer including senior) and cancers of haematopoletic system. BT-L polypeptide (e.g. cancer including senior) and cancers of haematopoletic system. BT-L polypeptide conditions and cancers and autonomous both of the bases. T-cell cancer including attribution graft versus bost disease. T-cell cancer including attribution graft symptoms associated with the purpose of the prolong graft symptoms associated with the care of the prolong graft symptomic and cancer and autonomous diseases. The molecules are also cancer included and passing and passing and passing and treatment of diseases and utcerative collitis, and claimater of diseases and utcerative and organical conditions, and for emphasions, and for emph

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polypuclectide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and

Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoletic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune diseases. B7-L dependent B-cell mediated diseases and autoimmune of the symptoms associated with molecules are useful for alleviating the symptoms associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They are also meeful as immunocomprosition according for home married and according to the second seco

Seminal vesicle hyperplasia in transgenic mice overexpressing B7-L CC seminal vesicle hyperplasia in transgenic mice overexpressing B7-L CC cancer including seminal vesicle cancer. Jung, brain, breast, ovarian, cc cancer including seminal vesicle cancer. Jung, brain, breast, ovarian, cc pathway can be manipulated to regulate cytotoxic T-lymphocyte response cc in allograft transplantation, graft versus host disease, T-cell cc molecules are useful for alleviating the symptoms associated with cd diseases involving chronic immune cell dysfunction or to treat caucoimmune diseases such as systemic lupus erythematosus, rheumatoid cc arthritis, multiple sclerosis, diabetes, immune thrombocytopenic confiammatory bowel disease (Crohn's disease and allecrative colitis), confiammatory bowel disease (Crohn's disease and allecrative colitis), can also useful as immunocunnessiva sonets for bone marrow.
treatment of allergy, asthma and hypersensitivity reactions, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (crave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of mouse B7-L_m3.
                                                                                                                                                                                                                          proliferation, including arterioscierosis and vaccination of toxic Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for any and humarsensitivity reactions,
                                                                                                                                                                                                                                                                                                                                                                                                           are also useful a immunoso survivoutilis and diabetes mellitus. They transplantation or to prolong graft survival B7-L molecules are also useful for diagnosis and treatment of diagnosis and diagnos

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      which is made from a water-insoluble carrier immobilized with a protein having the sequence shown here. The materials of the invention, including adsorbents, are for extracorporeal circulation, which are applicable in the selective elimination of diabetic complication factors from a body fluid, and are therefore useful in treating vascular lesions like arteriosclerosis due to carbonyl stress products caused by abnormally promoted carbonyl stress from excretory dysfunction.
                                                                                                                                                                                                                                                                                                  Human; Receptor for advanced glycosylation end product; RAGE; cardiant; tissue growth; neointimal formation; blood vessel; restenosis; diabetes; myocardial infarction; angioplasty; peripheral vascular surgery; angina; transgenic animal; acute thrombotic stroke; venous thrombosis.
                                                                                                                                                                                                                               WO200230889-A2
                                                                                                                                                                                                                                                                                                                                                                                             Human receptor for advanced glycosylation end product (RAGE) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                      27-AUG-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAE23219 standard; Protein; 404 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    advanced glycation/glycosylation end product (RAGE), so as to inhibit new tissue growth or neointimal formation in subject's blood vessels and preventing restenosis in the subject. The method is useful for inhibiting new tissue growth or neointimal formation in blood vessels in a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB; AAD36952.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 like non-human animal, a transgenic non-human animal or a human suffering from diabetes, acute thrombotic stroke, venous thrombosis, unstable angina, myocardial infarction, abrupt closure following anciopiasty or stent placement, or thrombosis as a result of peripheral vascular surgery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          blood vessel injury and preventing exaggerated restenosis in a diabetic subject. The method comprises administering an inhibitor of receptor for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method for inhibiting new tissue growth or neointimal formation in blood vessels in a subject that has experienced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The method is also useful for preventing restenosis and for determining whether a compound inhibits new tissue growth in a blood vessel in a subject. The present sequence is human receptor for advanced glycosylation end product (RAGE) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 16; 43pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nucleic acid or Gp354 polypeptide are used in the treatment of pancreatic injury and abnormal or disease conditions that relate to the pancreas, such as acute or chronic pancreatitis, pancreatic influence, pancreatic endocrine and hormonal imbalance, pancreatic tumours and pancreatic endocrine and hormonal imbalance, pancreatic tumours and eassociated cancers, and autoimmune disorders which affect the associated cancers, and autoimmune disorders which affect the pancreas. They are also used in the treatment of an injury to the CNS, and abnormal or disease conditions that relate to the CNS, including Alzheimer's disease, Parkinson's disease, senile dementia, migraine, epilepsy, neuritis, neurasthenia, neuropathy, neural degeneration and neural tumours (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     indicate a role in cell-cell recognition, binding, signalling and adhesion events in the pancreas and CNS. The present invention provides GP354 polypeptides and gP354 polynucleotides, as well as vectors, host cells, antibodies and related diagnostic and therapeutic methods. Claimed compositions comprising a gP354 therapeutic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acid sequence encoding a member of immunoglobulin superfamily, designated GP354, useful for the treatment of Alzheimer's disease, Parkinson's disease, senile dementia, migraine and epilepsy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Carulli JP, Lukashin AV, Kilburn DR,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                at low levels in central nervous system (CNS) tissue. It share more than 30% amino acid identity with any previously described protein. The protein structure and tissue distribution of GP35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the protein sequence of human GP354, a novel member of the immunoglobulin superfamily. GP354 is a pancreas enriched integral membrane protein, which is also detected
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB; ABL53873, ABL53875

The present sequence is the protein sequence of human panéreatic CC GP354, a novel member of the immunoglobulin superfamily. GP334 is CC a pancreas-enriched integral membrane protein, which is also CC detected at low levels in central nervous system (CNS) tissue. The CC protein structure and tissue distribution indicate a role for GP334 CC in the pancreas and CNS. The invention provides GP354 polypeptides CC and GP354 polypucleotides, as well as vectors, host cells, CC antibodies and related diagnostic and therapeutic methods. Claimed CC compositions comprising a gP354 nucleic acid or GP354 polypeptide CC are used in the treatment of pancreatic injury and abnormal or CC disease conditions that relate to the pancreas, such as acute or CC chronic pancreatitis, pancreatic inflammation, pancreatic encorine insufficiency, pancreatic endocrine and hormonal imbalance, CC which affect the pancreas. They are also used in the treatment of the CNS, including Alzheimer's disease conditions that relate CC confice the CNS and abnormal or disease conditions that relate CC confice the CNS and abnormal or disease conditions that relate CC confice the CNS and abnormal or disease conditions that relate CC confice the CNS and abnormal or disease conditions that relate CC confice the confic

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
